

LIGHT BOXES

High impact light boxes manufactured to your specification

- Instore light boxes
- Showrooms
- Exhibition & events

EYE CATCHING DISPLAYS

For instore decor

Light boxes create great product awareness. The light box frames are manufactured from a range of slim aluminium profiles and with a variety of LED illumination.

An ideal solution for retailers requiring high quality illuminated displays with easy to change graphics.

The frames are produced to your size specification and are available sea or powder coated to the RAL range of colours.

For more information – [contact us](#).

Light boxes used for instore promotions or as interior design in public spaces.

We make bespoke sizes to fit particular installations and interiors.

Textile print

Easy changeable motives without the use of tools.

Colours

The frames can be powder coated in all RAL colours.

LIGHT BOXES FOR EXHIBITIONS AND EVENTS.

Manufactured to your specification

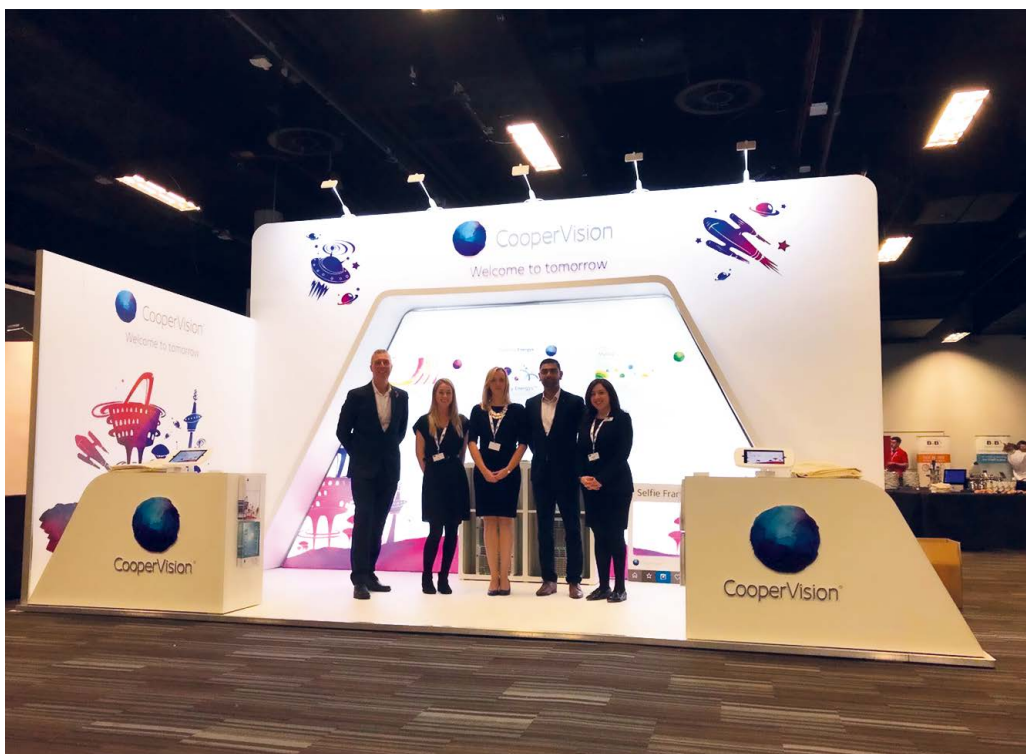

A well-designed stand is the first step towards new customers. Using light boxes on your stand increases awareness of your stand and attracts customers.

The light boxes are available to your specific sizes both single and double sided. They are used in many formats – free standing, columns or designed into the stand structure.

This makes the light boxes easy to integrate into your design and with the printed fabric creates a great finished product.

Large format light boxes have Led modules fitted to the profiles which makes the frame work easy to build, easy to dismantle and easy to transport.

Wall mounted

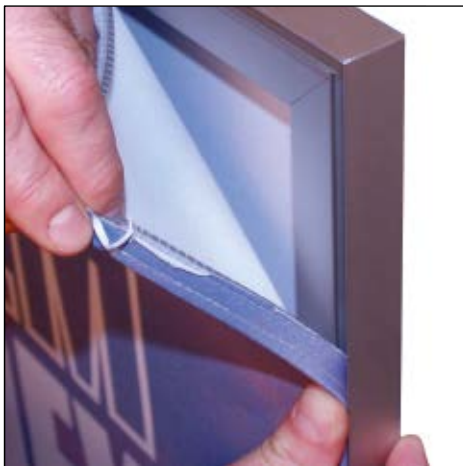

Suspended from the ceiling

Free-standing

FABRIC GRAPHICS FOR LIGHTBOXES

Easy mounting of banners

A PVC profile is sewn directly onto the fabric banner. To mount the banner, simply press the profile into the groove/track that run along the frame of the light box.

The Light boxes are manufactured for single sided as well as double sided print. For best results, we recommend the following for the print:

Graphics for print: Bleed = graphic dimensions plus 40mm on each side

Resolution: PDF in minimum 100 dpi in 1:1

Colours: Files must be sent as CMYK

Logos: Will be accepted as AI, EPS and PDF in min. 300 dpi

Fonts: Attached or outlined

EXAMPLES OF LED ILLUMINATION

Side illumination with LED modules

LED modules are fitted to the profiles which makes the frame work easy to build, easy to dismantle and easy to transport. The LED modules have a light distribution of 45 x 10 degrees – ideal for large format light boxes. They are available single and double sided with profile depths of 85mm, 120mm and 150mm. The led modules are available in two lengths – 5 x 3w and 3 x 3w 24v.

Back illumination with LED bars

The LED bars are mounted on the back panel and are suitable for small format light boxes and for frames at 68mm and 85mm depth. LED bars are also used for large format when both dimensions of the light box exceed 3000mm. The LED bar has a light spread of 170 degrees through diodes. The Led bars are available in a variety of lengths – the diodes are 1w each – 24v.

Back illumination with LED tiles

The LED tiles are similar to the LED bar but they provide a more powerful illumination with each diode being 2 x 4w 24v. The LED tile light spread is 170 degrees. They are available with 20 tiles on each cable and can be fitted in series.

LIGHT BOXES – LOCKING INTO SHELVING UNITS

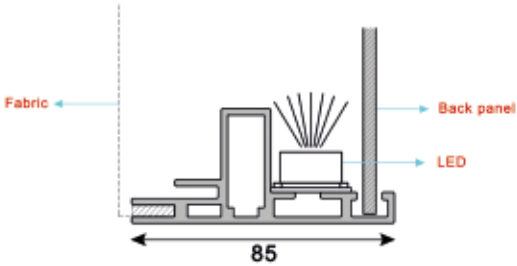

The light boxes can be fitted with most types of shelving and racking brackets. All manufactured to your specified modular size.

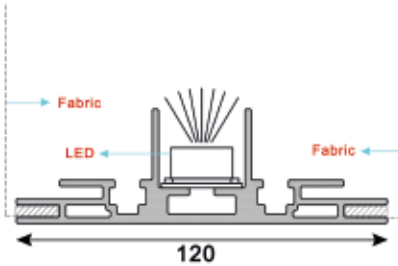

Bracket for mounting onto shelf wall

Mounted to shelving systems
